

Assignment: Commercial Verticals & Go to Market in Health Care

Remember to name your submission "Team Number- Go To Market"

A. Describe the nature of your product/ service with reference to the commercial verticals explained in the Material Content (Conducting Market Searches in Health Care)

The EmpowerDis App is a mobile health application designed to enhance the wellness of individuals with disabilities in Uganda by offering features such as medication reminders, symptom tracking, personalized exercise routines, educational resources, telemedicine, and mental wellness support. Falling under the Software Services - Low Regulatory Bar category, its development involves a swift Market Research Specification (MRS) phase, pilot testing, and implementation, all within a year. Business strategies include partnerships with clinical service providers and online marketing, supported by non-dilutive grants, philanthropy, and moderate angel investment. This approach facilitates a streamlined market entry and growth, providing a comprehensive digital health solution tailored to the specific needs of its target demographic

B. Answer the following questions below

- Describe your likely partners and the time they will be brought in?	Clinical Service Providers and Hospitals, involved from the early stages for pilot testing and integration into existing healthcare systems. Their feedback is crucial for refining the app's features. Private and Public Insurers, brought in during the mid-development phase to discuss coverage plans and demonstrate the app's potential to reduce healthcare costs. Government Health Ministries and Regulators, engaged early for regulatory approval and policy support. Their backing can facilitate widespread adoption. Non-profits and International Organizations, partnered with throughout the project to leverage their networks for user adoption and additional funding support. Distributors and Manufacturers, involved later in the development process to ensure effective distribution and production of any related devices. Regulatory Consultants, engaged early to navigate the regulatory landscape and ensure compliance with healthcare standards. Local Vendors: Collaborated with during the production phase to maintain quality and reduce costs. Competitors: Continuously monitored to stay ahead in innovation and market positioning.
- Where are your investments likely to come from and when in the timeline?	Seed Funding and Grants, at the initial stages, we'll seek seed funding and grants from non-profits, international organizations, and government programs focused on healthcare innovation and support for people with disabilities. These funds will help us develop the prototype and conduct preliminary research. Angel Investors and Early-Stage Venture Capital, once we have a working prototype and some initial validation from early adopters, we'll approach angel investors and early-stage venture capital firms. These investors can provide the necessary capital to refine the product, expand the

	development team, and begin pilot testing. Partnerships with Healthcare Providers and Insurers, as we move into the pilot testing phase, we anticipate forming strategic partnerships with hospitals, clinics, and insurance companies. These partners may provide investment in exchange for early access to the app, exclusive use agreements, or equity stakes. Their investment will help fund large-scale pilot programs and initial market entry. Series A Funding, after successful pilot testing and demonstrating the app's efficacy and market potential, we will aim for Series A funding from venture capital firms specializing in health tech. This round of funding will be crucial for scaling operations, expanding our user base, and enhancing the app's features based on feedback from the pilot phase. Government and Public Sector Support, throughout the timeline, we will continuously engage with government health ministries and agencies to secure ongoing support and funding. This could come in the form of grants, subsidies, or contracts for integrating our app into public health initiatives. Revenue Reinvestment, as we start generating revenue from subscriptions, service fees, or insurance partnerships, we will reinvest a portion of these earnings back into the business to support further development, marketing, and expansion efforts.
- What is the timeline to first revenue generated?	The timeline to first revenue generation for the EmpowerDis App is estimated to be 12-18 months. Initially, we will focus on developing a prototype and securing seed funding and grants within the first 6 months. This will be followed by 6 months of pilot testing and validation, supported by angel investors and early-stage venture capital. By the 12-month mark, we plan to launch the app in targeted markets, initiating marketing campaigns and securing initial paying users, thus beginning to generate revenue through subscriptions, service fees, and insurance partnerships. As we continue to scale and expand over the next 6 months, our revenue is expected to grow significantly
- What is the nature of that revenue (investment, license deal, client revenue,	The nature of the revenue for the EmpowerDis App will primarily be client revenue, generated through subscription fees from users and service fees for telemedicine consultations. Additionally, we will secure revenue through partnerships with private insurance companies and government health schemes, which will pay for the app as part of their service offerings. There may also be supplementary revenue from investment deals, including seed funding, angel investments, and possibly strategic partnerships with healthcare providers and advocacy groups, who might contribute through sponsorships or licensing deals for broader distribution and usage

etc.)	of the app
- What is the anticipated regulatory bar (low, medium, high) and rationale for your selection, and the time that you will submit?	The anticipated regulatory bar for the EmpowerDis App is medium. This classification is based on the app's functionalities, which include customizable medication reminders, symptom tracking, telemedicine capabilities, and mental wellness support tools. While these features are critical for enhancing health management, they do not involve direct clinical decision-making or invasive procedures, placing them below the high regulatory bar typical for medical devices or high-risk software. We plan to submit for regulatory approval within the first six months of development, ensuring compliance with local healthcare regulations and standards to facilitate a smoother market entry
- What is the timeline of your clinical validation study (user testing)	The timeline for our clinical validation study (user testing) is planned to start at the beginning of month 7 and continue through month 12 of our project. This six-month period will involve recruiting participants, conducting initial user tests, collecting and analyzing feedback, and implementing necessary adjustments. By aligning this study with the final stages of product development, we aim to ensure that the EmpowerDis App meets the needs of individuals with disabilities in Uganda effectively.

C. Draft a graphic of your timeline to market, using your answers to the question above: **(You could use a**

Table/ Gantt Chart to showcase this where appropriate.)

i. Below is an example

Gant chart showing EmpowerDis app timeline to market

Go-to-Market for Health Technologies

		Pilot Testing & Partners							
		Conduct Pilot Testing	30 days?	Mon 8/25/25	Fri 10/3/25	11			
		Form Partnerships with Insurers & Healthcare Providers	40 days	Mon 10/6/25	Fri 11/28/25	15			
		Secure Angel Investors & Early-Stage Venture Capital	60 days	Mon 12/1/25	Fri 2/20/26	16			
		Regulatory Approval & Launch							
		Submit for Regulatory Approval	60 days	Mon 2/23/26	Fri 5/15/26	17			
		Plan and Schedule Marketing Campaigns	40 days	Mon 5/18/26	Fri 7/10/26	21			
		Soft Launch	7 days	Mon 7/13/26	Tue 7/21/26	22			
		Official Launch	1 day?	Wed 7/22/26	Wed 7/22/26	23
